CONTRACTION OF ORIENTED POLYMERS DURING ANNEALING. [1963] 6p. 5 refs.
Order from OTS or SLA $1.10 63-18356

Trans. of Plasticheskie Massy (USSR) 1962, no. 6, p. 62-63.

DESCRIPTORS: *Plastic films, *Polyethylene plastics, *Halocarbon plastics, Fluorocarbons, Heat treatment, *Annealing, Physical properties, *Crystal structure, Transformations.

At each temperature, there is a definite amount of isothermal contraction in the crystalline polymer which was stretched at a lower temperature until a neck was formed in the direction of the fiber length. The isothermal contraction of stretched crystalline polymers increases with increasing temperature. The increase in the isothermal contraction with increasing temperature can be interpreted as a result of the irreversible decrease in the degree of oriented crystallinity. (Author)
